

Tester: Jett Viduya

Files Tested: [minesweeper.py](#)(game logic), UI [Display.py](#) (pygame UI and input)

Tools: Python 3, pygame-ce 2.5.8

Additional Information:

This comprehensive testing report was done with the code repository version as of 9/18/2026(next test will ideally be done on the same day as the due date). Each member who worked on their respective parts did some small testing while they were working as well. The following is aimed to test all of the respective parts after each member's iterations are approaching their finalizations.

Test Run Log

Run	Date	Code Version	Basic Checks	Requirements met	Open Bugs
1	9/18/2026	"main" as downloaded 9/18	9/11 pass	In Progress - 13/24 fully met	10

How Testing Was Conducted

- Manual play: I ran the game locally on my Windows laptop and manually ran each test.
- Code Review: the file headers were read to check the documentation requirements(R22-24).
- Visual Check: a screenshot of the running game was just inspected for labels, sprites, and general layout

Result Definitions

- Pass: works as required
- Partial: works but with a gap
- Fail: does not work/missing implementation
- Missing: not present or still in production

Section 1: Basic Function Checks

Does the game run and respond to basic input without breaking? These are baseline checks that should be met prior to further testing.

Function Checks

ID	Check	How Tested	Result	Bug
S1	Game launches from the project folder	Ran python "UI Display.py"	Pass ▾	
S2	Game launches from another folder(e.g. VS Code Run Button)	Ran directly(preference for running leans accessing via terminal after downloading game files)	Mis... ▾	B7
S3	First left-click creates the board and opens a cell	Left-clicked a cell on a new game	Pass ▾	
S4	Right-click places a flag	Right-clicked a covered cell	Pass ▾	
S5	Right-click on a flag removes it	Right-clicked the same cell twice	Pass ▾	
S6	Left-click on a flagged cell does nothing	Flagged a mine, then left-clicked it	Pass ▾	
S7	Left-click on an already-open cell does nothing (or chords)	Left-clicked cells that were already open	Pass ▾	
S8	Middle-click and scroll wheel are ignored	Middle-clicked and scrolled over the board	Pass ▾	
S9	Clicks on the row/column labels are ignored	Clicked the "1" row label (J1 opened) and right-clicked the top-left corner (J10 got flagged)	Fail ▾	B1
S10	Closing the window exits cleanly	Closed the window with the X button	Pass ▾	
S11	Rapid clicking doesn't crash the UI	Clicked quickly all over the board for about a minute	Pass ▾	

Section 1 Result: 9/11 pass. S2 crashes with a missing-file error when launched from another folder(again could be a design choice that might not be present via fellow group members' design choices), and S9 fails because clicking the labels acts on a cell on the other side of the board.

Section 2: Project Requirements Check

Each row is one requirement from the project specifications on Canvas.

Game Setup				
ID	Requirement	How Tested	Result	Bug
R1	10×10 grid	Counted the grid on screen	Pass ▾	
R2	Columns labeled A–J, rows 1–10	Checked the labels on screen	Pass ▾	
R3	Mine count chosen by the user, 10 to 20	Launched the game: it starts right away with no way to pick a mine count	Mis... ▾	B6
R4	Mines placed randomly at game start	Played several games and compared where the mines were	Pass ▾	
R5	First clicked cell is mine-free	Started several games and checked the first click was never a mine	Par... ▾	B1
R6	All cells start covered, no flags	Looked at the board before the first click	Pass ▾	

Gameplay				
ID	Requirement	How Tested	Result	Bug
R7	Clicking a cell uncovers it	Left-clicked a cell	Pass ▾	
R8	Uncovering a mine ends the game	Clicked a mine(just closes the window, no display screen)	Par... ▾	B2
R9	Safe cells show the number(0-8) of adjacent mines	Spot-checked numbers against the mines around them	Pass ▾	
R10	Zero cells recursively	Clicked an area with no mines	Pass ▾	

	uncover their neighbors	nearby has all neighbors open		
R11	Players can toggle flags on covered cells	Manual check	Pass ▾	

Mine Flagging

ID	Requirement	How Tested	Result	Bug
R12	Flags can only go on covered cells	Right-clicked an open cell	Pass ▾	
R13	Flagged cells can't be uncovered until unflagged	Manual check	Pass ▾	
R14	Display remaining flag count(mines - flags)	Looked for it on screen	Mis... ▾	B5

Player Interface

ID	Requirement	How Tested	Result	Bug
R15	Grid shows uncovered, flagged, number, and empty (zero) cells	Looked at the board while playing	Pass ▾	
R16	Remaining mine count shown	Looked for it on screen	Mis... ▾	B5
R17	Status indicator ("Playing", "Game Over: Loss", "Victory")	Looked for status text while playing	Mis... ▾	B4

Game Conclusion

ID	Requirement	How Tested	Result	Bug
R18	Loss reveals all mines	Clicked a mine(window just closes, nothing revealed)	Fail ▾	B2
R19	Win when all safe cells are uncovered	Opened every safe cell(detected, but the window just closes)	Par... ▾	B3

Grading Criteria Checks

ID	Requirement	How Tested	Result	Bug
R20	Withstands stress testing (no crashes/leaks)	S11	Pass ▾	
R21	Intuitive interface, no manual needed	Played as a new user(for now; will be fixed soon, no status, counter, or setup screen)	Fail ▾	B2-B6
R22	Prologue comment in every file (name, description, inputs/outputs, sources, author, date)	Read each file header(look below)	Par... ▾	B10
R23	In-code comments say whether code is original, sourced or combined	Read the code	Mis... ▾	B10
R24	Board stored as a 2D array	Read minesweeper.py	Pass ▾	

Section 2 Result: 13/24 fully met, 4 partial, 5 missing, 2 fail. These will be re-checked in the next Test Report after fixes are pushed.

Section 3: Bugs and Potential Fixes

The following is just sorted by priority

Bugs/Potential Fixes				
ID	Priority	Bug	Expected	Actual
B1	High	Clicking a label digs or flags a cell on the opposite side of the board	Nothing happens	The click becomes row/col -1, and Python wraps -1 to index 9, so J1/J10 gets dug or flagged. Confirmed by hand on 9/19: clicking the "1" label opened J1, and right-clicking the top-left corner flagged J10.
B2	High	Losing closes the window instantly	Mines revealed, "Game Over: Loss" shown	Window closes on the same frame
B3	High	Winning closes the window instantly	"Victory" shown	Window closes
B4	High	No status indicator	Status text on screen	None
B5	High	No remaining-mines counter	Counter shows mines – flags	None
B6	High	Player can't choose the mine count	Prompt for 10–20	Always 15; no way to choose
B7	Medium	Crash when launched from another folder(again, could've been a functionality that was as design choice)	Game opens	FileNotFoundException: SpriteSheet.png
B8	Low	Leftover event loop before the main loop uses raw pixels as	Removed	Dead code; would crash if a click were queued

		rows/columns		
B9	Low	No way to start a new game without relaunching	"Play again" option	None
B10	High(grading)	Missing prologue fields and source attribution	All fields present	Missing description, I/O, dates, full names/authors; testmine.py has none
